

Electronic Medication Optimisation Pathway (EMOP)

Did you know?

A recent audit of NHS hospital discharges showed that 79% of patients were prescribed at least one new medication after being discharged from hospital.

Where community pharmacies follow-up with at-risk patients after they have been discharged, **hospital readmissions are reduced** and **patient safety is improved**.

That's where you come in

By completing EMOP referrals sent by your local acute trust via the PharmOutcomes platform, **you are helping to keep patients safe**.

Key things to remember

- Check PharmOutcomes at least once a day to check for new referrals
- Set time aside in your day to action all outstanding referrals
- If you have any questions or concerns, contact your LPC who will be able to help.

Thank you very much for your continued support
