PSNC Briefing 031/19: Guidance on the 2019/20 Seasonal Influenza Vaccination Advanced Service

This PSNC Briefing provides guidance for community pharmacy contractors and their teams on the 2019/2020 NHS Seasonal Influenza Vaccination Advanced Service. Information and resources to support the service are also available at psnc.org.uk/flu.

a) Introduction

On 20th July 2015, NHS Employers (on behalf of NHS England) and PSNC announced that a seasonal influenza vaccination service would be added to the Community Pharmacy Contractual Framework (CPCF) as an Advanced Service. This service is the fifth Advanced Service in the CPCF. PSNC received correspondence from the Department of Health and Social Care (DHSC) that it would re-commission the Flu Vaccination Service in 2019/20.

Pharmacists and contractors practising in Wales should visit the Community Pharmacy Wales website for information on flu vaccination services in Wales.

This document provides detailed guidance for contractors and their teams on the service and highlights other resources which may support them to provide the service.

b) Background and aims of the service

Each year from September through to January the NHS runs a seasonal flu vaccination campaign aiming to vaccinate all patients who are at risk of developing more serious complications from the virus. These include people aged 65 years and over, pregnant women and those with specific health conditions.

Community pharmacies have offered flu vaccinations as a private service for many years, often to a range of patients who would not qualify for NHS vaccinations and some who would but were prepared to pay for it anyway. The accessibility of pharmacies, their extended opening hours and the option to walk in without an appointment have proved popular with patients seeking vaccinations.

Before 2015/16, many pharmacies were commissioned to provide local NHS flu vaccination services. These services sat alongside the nationally commissioned GP vaccination service, giving patients another choice of venue for their vaccination and helping commissioners to meet their local NHS vaccination targets. Many schemes demonstrated high levels of patient satisfaction and evidence that pharmacy vaccination is accessible, often capturing ‘hard to reach’ patients who would not otherwise take up the offer of vaccination.
PSNC worked to persuade the NHS of this success and of the value that a national service could bring and NHS England subsequently decided that in 2015/16 all community pharmacies should be allowed to vaccinate patients 18 years and over in at-risk groups against flu with the commissioning of a new Advanced Service. The successful implementation of the national 2015/16 service has led to the service being re-commissioned in subsequent years.

Immunisation is one of the most successful and cost-effective health protection interventions and is a cornerstone of public health. High immunisation rates are key to preventing the spread of infectious disease, complications and possible early death among individuals and protecting the population’s health through both individual and herd immunity.

For most healthy people, influenza is an unpleasant but usually self-limiting disease. However, children, older people, pregnant women and those with underlying disease are at risk of severe illness if they catch it.

The aim of the seasonal influenza vaccination programme is to protect those who are most at risk of serious illness or death should they develop influenza, by offering protection against the most prevalent strains of influenza virus.

The Community Pharmacy Seasonal Influenza Vaccination Advanced Service (Flu Vaccination Service) will support NHS England and NHS Improvement (NHSE&I), on behalf of Public Health England (PHE), in providing an effective vaccination programme in England and it aims:

a. to sustain and maximise uptake of flu vaccine in at risk groups by continuing to build the capacity of community pharmacies as an alternative to general practice;

b. to provide more opportunities and improve convenience for eligible patients to access flu vaccinations; and

c. to reduce variation and provide consistent levels of population coverage of community pharmacy flu vaccination across England by providing a national framework.

c) Commencement and duration of the service

This service will commence from 1st September 2019 or the date on which the Directions (see section d) come into force, whichever is the later; contractors will be notified of this date via the PSNC website. The service ends on the last day of March (31st March 2020), but focus should be given to vaccinating eligible patients between 1st September 2019 and 31st January 2020, with eligible patients being vaccinated as soon as the vaccine is available.

Widespread vaccination may continue until December to achieve maximum impact, but where possible, it should be completed before flu starts to circulate in the community. However, flu can circulate considerably later than this and pharmacists should apply clinical judgement to assess the needs of individual patients who are eligible for vaccination under this service to receive immunisation beyond 31st January 2020. This should take into account the level of flu-like illness in the community and the fact that immune response following immunisation takes about two weeks to fully develop.

d) The service specification and Directions

The service specification describes the requirements for provision of the service and it should be read and understood by all pharmacists providing the service.

The amendments to the Pharmaceutical Services (Advanced and Enhanced Services) (England) Directions 2013 (the Directions) provide the legal basis for provision of the service (please note, at the time of publication of this Briefing, the amendments have not yet been published – PSNC will notify contractors through their normal communication channels when they are published). A consolidated version of the Directions will be made available on the PSNC website.
e) The national Patient Group Direction

The administration of a flu vaccine - a Prescription Only Medicine – as part of the Flu Vaccination Service is legally authorised by a national Patient Group Direction (PGD). The national PGD for the Flu Vaccination Service has been developed and clinically approved by PHE, and NHSE&I has authorised its use by community pharmacists providing the Advanced Service; it cannot be used to authorise administration of flu vaccines under any other NHS or private services.

Pharmacists who will administer flu vaccines under the authority of the national PGD must:

- download a copy of the latest version of the PGD from the NHS England website;
- read the PGD and ensure they fully understand the content of the PGD, including the eligible patient groups, the inclusion and exclusion criteria and the record keeping requirements; and
- print off a copy of the PGD and complete the Practitioner declaration to confirm they have read and understood the content of the PGD and that they are willing and competent to work to it within their professional code of conduct – if there is more than one pharmacist in the community pharmacy who will be providing the Flu Vaccination Service, one copy of the PGD can be printed and all pharmacists can complete the Practitioner declaration on this one copy.

The Authorising Manager declaration must then be completed. The Authorising Manager’s role is to confirm the pharmacist:

- is aware of the service specification and requirements for provision of the service;
- has completed the Declaration of Competence (DoC) self-assessment framework and has printed and signed the statement of declaration; and
- has the organisation’s approval to provide the service.

In certain circumstances, for example, a community pharmacy where the pharmacist who will administer vaccines is also the superintendent pharmacist or contractor, it may be necessary for the authorising manager to be the same person as the practitioner, though this situation should be avoided wherever possible.

These steps must be completed before an individual pharmacist is authorised to administer flu vaccines as part of the Flu Vaccination Service.

f) Patient eligibility to receive the service

This service covers those patients most at risk from influenza aged 18 years and older, listed in Annex A of the service specification (and listed below).

The selection of these eligible groups has been informed by the target list from the NHS England, PHE and the DHSC annual flu plan.

Pharmacists are not authorised to administer flu vaccines to other patient groups as part of the Flu Vaccination Service. If a vaccine is administered to patients in other groups, the contractor will not be paid for that vaccination and the administration will have been undertaken outside the authority of the national PGD.
<table>
<thead>
<tr>
<th>Eligible groups</th>
<th>Further details</th>
</tr>
</thead>
<tbody>
<tr>
<td>All people aged 65 years or over</td>
<td>Including those becoming age 65 years by 31 March 2020.</td>
</tr>
<tr>
<td>People aged from 18 years to less than 65 years of age with one or more serious medical condition(s) outlined below:</td>
<td></td>
</tr>
<tr>
<td>Chronic (long term) respiratory disease, such as severe asthma, chronic obstructive pulmonary disease (COPD) or bronchitis</td>
<td>Asthma that requires continuous or repeated use of inhaled or systemic steroids or with previous exacerbations requiring hospital admission. Chronic obstructive pulmonary disease (COPD) including chronic bronchitis and emphysema; bronchiectasis, cystic fibrosis, interstitial lung fibrosis, pneumoconiosis and bronchopulmonary dysplasia (BPD).</td>
</tr>
<tr>
<td>Chronic heart disease, such as heart failure</td>
<td>Congenital heart disease, hypertension with cardiac complications, chronic heart failure, individuals requiring regular medication and/or follow-up for ischaemic heart disease.</td>
</tr>
<tr>
<td>Chronic kidney disease at stage three, four or five</td>
<td>Chronic kidney disease at stage 3, 4 or 5, chronic kidney failure, nephrotic syndrome, kidney transplantation.</td>
</tr>
<tr>
<td>Chronic liver disease</td>
<td>Cirrhosis, biliary atresia, chronic hepatitis.</td>
</tr>
<tr>
<td>Chronic neurological disease, such as Parkinson’s disease or motor neurone disease, or learning disability</td>
<td>Stroke, transient ischaemic attack (TIA). Conditions in which respiratory function may be compromised due to neurological disease (e.g. polio syndrome sufferers). Clinicians should offer immunisation, based on individual assessment, to clinically vulnerable individuals including those with cerebral palsy, learning disabilities, multiple sclerosis and related or similar conditions; or hereditary and degenerative disease of the nervous system or muscles; or severe neurological disability.</td>
</tr>
<tr>
<td>Diabetes</td>
<td>Type 1 diabetes, type 2 diabetes requiring insulin or oral hypoglycaemic drugs, diet controlled diabetes.</td>
</tr>
<tr>
<td>Immunosuppression, a weakened immune system due to disease (such as HIV/AIDS) or treatment (such as cancer treatment)</td>
<td>Immunosuppression due to disease or treatment, including patients undergoing chemotherapy leading to immunosuppression, bone marrow transplant, HIV infection at all stages, multiple myeloma or genetic disorders affecting the immune system (e.g. IRAK-4, NEMO, complement disorder). Individuals treated with or likely to be treated with systemic steroids for more than a month at a dose equivalent to prednisolone at 20mg or more per day. It is difficult to define at what level of immunosuppression a patient could be considered to be at a greater risk of the serious consequences of influenza and should be offered seasonal influenza vaccination. This decision is best made on an individual basis and left to the patient’s clinician. Some immune-compromised patients may have a suboptimal immunological response to the vaccine.</td>
</tr>
<tr>
<td>Asplenia or splenic dysfunction</td>
<td>This also includes conditions such as homozygous sickle cell disease and coeliac syndrome that may lead to splenic dysfunction.</td>
</tr>
<tr>
<td>Morbid obesity (class III obesity)</td>
<td>Adults with a Body Mass Index $\geq 40$ kg/m$^2$.</td>
</tr>
<tr>
<td>All pregnant women (including those women who become pregnant during the flu season)</td>
<td>Pregnant women aged 18 or over at any stage of pregnancy (first, second or third trimesters).</td>
</tr>
<tr>
<td>---</td>
<td>---</td>
</tr>
<tr>
<td>People living in long-stay residential care homes or other long-stay care facilities</td>
<td>People aged 18 or over living in long-stay residential care homes or other long-stay care facilities where rapid spread is likely to follow introduction of infection and cause high morbidity and mortality. This does not include, for instance, prisons, young offender institutions, or university halls of residence.</td>
</tr>
<tr>
<td>Carers</td>
<td>People aged 18 or over who are in receipt of a carer’s allowance, or those who are the main carer of an older or disabled person whose welfare may be at risk if the carer falls ill.</td>
</tr>
<tr>
<td>Household contacts of immunocompromised individuals</td>
<td>People who are household contacts, aged 18 and over, of immunocompromised individuals who expect to share living accommodation on most days over the winter and, therefore, for whom continuing close contact is unavoidable.</td>
</tr>
<tr>
<td>Social care workers</td>
<td>Health &amp; social care staff, employed by a registered residential care/nursing home or registered domiciliary care provider or a voluntary managed hospice provider, who are directly involved in the care of vulnerable patients/clients who are at increased risk from exposure to influenza, meaning those patients/clients in a clinical risk group or aged 65 years and over.</td>
</tr>
<tr>
<td>Hospice workers</td>
<td>Health &amp; social care staff, employed by a voluntary managed hospice provider, who are directly involved in the care of vulnerable patients/clients who are at increased risk from exposure to influenza, meaning those patients/clients in a clinical risk group or aged 65 years and over.</td>
</tr>
</tbody>
</table>

**g) Pharmacy eligibility to provide the service**

There are a number of conditions that will be specified in the Directions which contractors must comply with prior to provision of the service. These include:

1) Contractors must be satisfactorily providing all Essential Services and be compliant with the clinical governance requirements of the CPCF.

2) Pharmacists who will provide the service must be competent to provide the service (see section h for further details).

3) Contractors must have a Standard Operating Procedure (SOP) in place for provision of the service, having regard to the requirements of the national PGD and service specification of which all pharmacy staff are aware, and which covers the following points as a minimum:
   - the provision of the service to patients and the roles of different staff members;
   - the ongoing conditions under which the service needs to be provided (specified in the service specification);
   - cold chain integrity;
   - needle stick injuries;
   - pharmacists undertaking vaccinations should be advised to consider being vaccinated against hepatitis B;
   - the identification and management of adverse reactions; and
   - the handling, removal and safe disposal of any clinical waste related to the provision of the service.
If the contractor is to provide the service in a care home or patient’s own home, the SOP must also detail provision of the service and the role of staff members in that location.

4) If the contractor is to provide the service in a care home, they must have notified the patient’s GP practice and the local NHSE&I team that they intend to vaccinate the patient off-site. If the contractor intends to provide the service at a patient’s home, they must also notify the local NHSE&I team (see section I for further details).

5) The pharmacy must have a consultation room which meets the following requirements:
   • is clearly designated as a room for confidential consultations;
   • is distinct from the general public areas of the pharmacy premises; and
   • is a room where both the person receiving the service and the pharmacist who is to administer the vaccine are able to sit down together and talk at normal speaking volumes without being overheard by any other person (including pharmacy staff).

These requirements do not prevent the presence of other persons where the patient requests, or consents to this. For example, where the pharmacist uses a chaperone, or wishes to include a pre-registration trainee in the consultation as part of their training, this would be allowed if the patient consents. Similarly, the patient may prefer that they are accompanied by another person during the consultation.

Where a contractor is to provide the service at a care home or other long-stay care facility it must be undertaken in a room where both the person receiving the service and the pharmacist who is to administer the vaccine are able to sit down together and talk at normal speaking volumes without being overheard by any other person, other than a person whose presence the person receiving the service requests or consents to (such as a carer).

**h) Training and competency requirements**

All pharmacy staff involved in the provision of the Flu Vaccination Service should receive appropriate training relevant to the role they will undertake. Contractors are required to demonstrate that all pharmacists providing the service in their pharmacy have the skills needed to do so.

There are a number of organisations offering training and support for provision of flu vaccination services and contact details can be found on the [PSNC website](#). The [National Minimum Standards and Core Curriculum for Immunisation Training for Registered Healthcare Practitioners](#) set out the knowledge and skills that healthcare professionals undertaking vaccination services need to have. Pharmacists who will provide the Flu Vaccination Service must have completed practical training in vaccination that meets these requirements. NHSE&I has determined that pharmacists providing the Flu Vaccination Service need to attend face-to-face training for both injection technique and basic life support training (including administration of adrenaline for anaphylaxis) at least every three years.

This requirement means that a pharmacist who undertook face-to-face training for both injection technique and basic life support in 2017 would not need to undertake face-to-face training in 2019. Assuming the service continues to be commissioned, the pharmacist would then need to undertake face-to-face training in 2020 to continue to provide the service.
The Declaration of Competence (DoC) approach (developed by the Community Pharmacy Competence Group) has been agreed by NHSE&I, NHS Employers and PSNC as being the way by which pharmacists providing the Flu Vaccination Service must demonstrate their competence to the contractor who is contracted to provide the service and to NHSE&I.

In 2018, the Community Pharmacy Competence Group published a new combined Vaccination services DoC, hosted on the Centre for Pharmacy Postgraduate Education (CPPE) website.

Previously there were two separate DoC frameworks for vaccination services; the NHS Seasonal Influenza Vaccination Advanced Service and other locally commissioned Immunisation services; these two have been merged into a single DoC.

Pharmacy professionals who will be providing the Flu Vaccination Service (Advanced Service) and a locally commissioned influenza service will now only be required to complete one DoC.

**To complete the DoC process:**

1. Visit the CPPE website Declaration of Competence page and select the Vaccination services DoC. You will then be asked to log in to the CPPE website.

2. Following logging in you will see the following page:
3. Read and work through the DoC self-assessment framework which explains the competency requirements for pharmacists providing vaccination services.

There are three parts:

Section A - This is the DoC framework, which highlights the key competencies expected of all pharmacy professionals providing the service.

- work through the DoC framework;
- review the competencies and complete each section with evidence of and information on the learning, experience, assessment, and other training you have completed to meet each competency. By doing this you will identify any gaps in competence. If you cannot answer a question to your own satisfaction, then you should undertake some extra learning – refer to section B; and
- if you intend to provide the Flu Vaccination Service in long-stay residential care homes, other long-stay facilities or in patients’ homes, then you must also complete Additional competencies – off-site vaccinations in Section A.
Section B - This part of the DoC process includes the suggested learning and assessments you should consider, linked to the core and service-specific competencies.

- review the suggested learning and assessments;
- reflect on your previous learning, experience and assessments;
- consider what learning has recently been completed as part of your CPD and which areas of learning and development may need updating; and
- identify the learning and assessment resources required to fill any gaps in competence from Section A and complete the relevant learning and assessment.

Then revisit and complete the DoC framework in Section A, noting down the additional learning completed as appropriate.

Section C – This is a reference guide and includes professional standards and frameworks referred to in A guide to using the Declaration of Competence (DoC) system.

Declaration – The final part is the DoC statement that you must print and sign to acknowledge professional responsibility that you are competent to provide vaccination services.

- Access, print and sign the DoC statement from the CPPE website. This is pre-populated with the CPPE learning and assessments you have completed for the service, with the dates of completion. Add the details of other learning to the declaration (for example, training provided by your employer);
- A copy of this signed DoC statement should be retained at each pharmacy where the pharmacist provides the Flu Vaccination Service, and this should be attached to the Flu Vaccination Service PGD. Local NHSE&I teams may ask to see copies of pharmacists’ DoC statements when they visit pharmacies to undertake contract monitoring;
- Pharmacists should retain their completed DoC self-assessment framework, so they can make this available to their employer or NHSE&I on request.

4. Once you have signed the DoC statement, confirm this on the CPPE website to update your CPPE learning record.

Pharmacists providing the Flu Vaccination Service should work through the DoC system every two years.
i) The vaccines to be used in the service

The vaccines which can be used in the service are those listed in [The national flu immunisation programme 2019/20 (DHSC/NHS England/PHE)](https://www.gov.uk/government/publications/national-flu-immunisation-programme-2019-20) and authorised for use by the PGD:

<table>
<thead>
<tr>
<th>Product Name</th>
<th>Manufacturer</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fluarix™ TetraV– QIVe (standard egg-grown quadrivalent influenza vaccine), split virion, inactivated virus</td>
<td>GSK</td>
</tr>
<tr>
<td>Quadrivalent Influenza Vaccine – QIVe (standard egg-grown quadrivalent influenza vaccine), split virion, inactivated</td>
<td>MASTA</td>
</tr>
<tr>
<td>Quadrivalent Influenza Vaccine Tetra MYL– QIVe (standard egg-grown quadrivalent influenza vaccine), supplied as surface antigen, inactivated</td>
<td>Mylan</td>
</tr>
<tr>
<td>Quadrivalent Influvac sub-unit Tetra – QIVe (standard egg-grown quadrivalent influenza vaccine), supplied as surface antigen, inactivated</td>
<td>Mylan</td>
</tr>
<tr>
<td>Quadrivalent Influenza vaccine – QIVe (standard egg-grown quadrivalent influenza vaccine), split virion, inactivated</td>
<td>Sanofi Pasteur vaccines</td>
</tr>
<tr>
<td>Flucelvax® Tetra – QIVc (cell-grown quadrivalent influenza vaccine), supplied as surface antigen, inactivated, prepared in cell cultures</td>
<td>Seqirus UK Ltd</td>
</tr>
<tr>
<td>Fluad® - aTIV supplied as surface antigen, inactivated, adjuvanted with MF59C.1</td>
<td>Seqirus UK Ltd</td>
</tr>
</tbody>
</table>

The PGD does not cover the use of the Fluenz Tetra nasal spray or the trivalent Influenza vaccine, high-dose (TIV-HD, standard egg-grown trivalent influenza vaccine, split virion, inactivated) listed in the national flu immunisation programme 2019/20. The PGD also does not cover standard dose non-adjuvanted trivalent influenza vaccine (TIVe).

j) Providing the service

This section of the guidance covers some of the practical requirements related to provision of the Flu Vaccination Service. A checklist to help contractors and their teams to prepare for and to provide the service can be found at the end of this Briefing.

Clinical recommendations for vaccine type

For adults aged 18 years to under 65 years in clinical at-risk groups and other eligible groups (including frontline health and social care workers), the egg-grown quadrivalent influenza vaccine (QIVe) or the cell-based quadrivalent influenza vaccine (QIVc) is recommended.

Adults aged 65 years and over, the QIVc or adjuvanted trivalent influenza vaccine (aTIV), Fluad® is recommended. Please note, aTIV, (Fluad®) is licensed for individuals aged 65 years and over. It may be administered under the PGD to 64 year olds turning 65 years of age by 31st March 2020 in accordance with the recommendations for the national influenza immunisation programme for 2019/20 as an off-label use. Further information on off-label use of this vaccine can be found in the PGD.

QIVe is not recommended in this age group as QIVc and aTIV are preferable on the grounds of both clinical and cost-effectiveness.

Storage of vaccines

Vaccines should be stored in line with the requirements set out by their manufacturer in the [Summary of Product](https://www.gov.uk/government/publications/national-flu-immunisation-programme-2019-20).
Characteristics. The National Patient Safety Agency issued an alert in 2010 giving guidance on vaccine cold storage for all healthcare providers, including community pharmacies.

All refrigerators in which vaccines are stored must have a maximum / minimum thermometer. Readings must be taken and recorded from the thermometer on all working days.

Consent
As with the provision of any pharmacy service, the patient must consent to being vaccinated. The General Pharmaceutical Council’s Guidance on Consent provides information on consent for pharmacists and their teams.

Patients who consent to participate in the Flu Vaccination Service must complete a consent declaration before being administered the vaccine using the national Flu Vaccination Consent Form (Annex D of the service specification) or an alternative form which uses the same wording and captures the same information as the form set out in Annex D.

Completion of this form grants consent to the administration of the vaccine and the sharing of information about the administration of the vaccine with the patient’s GP practice. It also grants consent for the sharing of relevant information, where appropriate with NHSE&I and the NHS Business Services Authority (NHSBSA) for post payment verification (PPV).

Information for patients
Each patient being administered a vaccine should be given a copy of the manufacturer’s patient information leaflet about the vaccine.

Referral of patients eligible for other vaccinations
Patients who are eligible for other vaccinations, for example, pneumococcal and shingles vaccines, should be referred to their GP practice for these vaccinations (or they can be administered by the pharmacy if they are contracted to do so under the terms of a Local Enhanced Service).

Clinical waste
Contractors are required to make arrangements for the removal and safe disposal of any clinical waste related to the provision of this service; NHSE&I will not make these arrangements on behalf of contractors. This includes vaccinations carried out in long-stay residential care homes, other long-stay care facilities or in a patient’s home.

Contractors must also ensure that staff are appropriately trained and made aware of the risks associated with the handling and disposal of clinical waste and that correct procedures are used to minimise those risks. A needle stick injury procedure must be in place.

Occupational health
Contractors must ensure that pharmacists involved in the provision of this service are advised that they should consider being vaccinated against hepatitis B and be advised of the risks should they decide not to be vaccinated.

Service records and IT support for the service
In many areas LPCs and local NHSE&I teams have been able to arrange IT support for the service. Contact your LPC to find out whether that is the case in your area.
The national Flu Vaccination Record Form (Annex E of the service specification) should be used to maintain a clinical record for the Flu Vaccination Service. If a contractor has access to an IT system which allows capture of the data elements within the Flu Vaccination Record Form, this can be used to maintain the clinical record for the service.

**Patient questionnaire**
Due to the proven success of the service, from 2019/20, contractors will no longer be required to ask patients to complete a patient questionnaire after they have received a flu vaccination.

**Communicating with GP practices**
Contractors must ensure that a notification of the vaccination is sent to the patient’s GP practice on the same day the vaccine is administered or on the following working day. This can be undertaken by post, hand delivery, secure email (such as the pharmacy’s NHSmail account) or secure electronic data interchange. Please note, notifications can no longer be sent by fax.

If an electronic method is used to transfer data to the relevant GP and a problem occurs with this notification platform, the contractor should ensure a hard copy of the paperwork is sent to the GP practice.

Where the notification to the GP practice is undertaken via hardcopy the national GP Practice Notification Form (Annex B of the service specification) must be used.

The information sent to the GP practice should include the following details as a minimum:

- a. the patient’s name, address, date of birth and NHS number (where known);
- b. the date of the administration of the vaccine;
- c. the applicable SNOMED CT code;
- d. any adverse reaction to the vaccination and action taken/recommended to manage the adverse reaction; and
- e. reason for patient being identified as eligible for vaccination (for example, aged 65 or over, has diabetes, etc).

Where a patient presents with an adverse drug reaction following the initial vaccination and the pharmacist believes this is of clinical significance, such that the patient’s GP practice should be informed, this information should be shared with the GP practice as soon as possible either via the GP Practice Notification Form or if that has already been sent to the GP practice, by an alternative method of communication.

**Provision of data to NHS England**
Payment claims for the service will be made to the NHSBSA (see section k for further details) and they will subsequently share data on service provision with NHSE&I.

Relevant information from the national Flu Vaccination Consent Form may, on request, be shared with NHSE&I and NHSBSA for the purpose of PPV.

**Availability of the service**
Contractors will naturally want to ensure that their service is as accessible as possible for patients in order that they can maximise service provision. This is also of importance to NHSE&I and therefore the service specification states that contractors should seek to ensure that the service is available throughout the pharmacy’s contracted opening hours (i.e. core and supplementary opening hours). Contractors will therefore want to ensure that locums or relief pharmacists are appropriately trained to ensure continuity of service provision across the opening hours of the pharmacy.
k) Payments and the process for claiming payments

Contractors providing the Flu Vaccination Service will be paid £8.08 per administered dose of vaccine plus an additional fee of £1.50 per vaccination (i.e. a total of £9.58 per administered vaccine). The additional fee is in recognition of costs incurred relating to the provision of the service including training and disposal of clinical waste. Such costs are not reimbursed elsewhere in the CPCF.

Contractors will also be reimbursed for the vaccine costs at the basic price (list price) of the individual vaccine administered and an allowance at the applicable VAT rate will also be paid.

Funding for the service comes from the NHS vaccination budget and is in addition to and outside of community pharmacy funding for 2019/2020. The total funding delivered will be dependent on uptake of the service, but no cap has been set for this.

Claims for payment for the service must be made electronically, using the Manage your Service (MYS) application on the NHSBSA website. Contractors are encouraged to register for MYS as soon as possible to ensure they are registered for when they come to claim payment for vaccines administered during September 2019.

Claims will be accepted by NHSBSA within six months of administration of the vaccination or by 31st August 2020, whichever date is earlier, in accordance with the usual Drug Tariff claims process. Later claims will not be processed.

l) Provision of the service off-site

Responding to a request to vaccinate people off-site

Contractors can provide the Flu Vaccination Service off-site when a request is received:

- from a patient to vaccinate them in their own home (where the pharmacy has an existing clinical relationship with the patient, e.g. pharmacy services have previously been provided to the patient) or
- from a long-stay care home or long-stay residential facility to vaccinate a resident/patient in the home/facility.

However, before undertaking any off-site vaccinations, a contractor must submit a completed copy of the Notification of intent to provide off-site NHS flu vaccinations (Annex C of the service specification) to the local NHSE&I team. No acknowledgment of the receipt of the form is required by the contractor before they provide an off-site vaccination.

This form sets out the requirements which must be complied with when providing off-site vaccinations. For care homes, each patient’s GP must also be contacted prior to the visit to the care home to make them aware that the pharmacist will be vaccinating their patient.

Additional points which contractors should consider when planning the provision of off-site vaccinations include:

- pharmacists should consider being accompanied by a trained pharmacy support staff member during visits. The primary role of the support staff member is to assist in the event of an emergency, but they could also undertake administrative tasks and, where necessary, act as a chaperone; and
- contractors must ensure that they meet the requirements of The Waste (England and Wales) (Amendment) Regulations 2012 in terms of transferring pharmaceutical waste from the site of vaccination back to the pharmacy premises for subsequent safe disposal.
Maintaining the cold chain
Pharmacists must ensure that the cold chain storage of the vaccines is maintained. Vaccines should be taken from the pharmacy fridge and placed into an appropriate validated cool box (which will maintain the vaccines at a temperature between 2°C and 8°C) just before travel to the off-site location.

The vaccines should be kept in their packaging and should be insulated from the cooling system within the cool box, e.g. using bubble wrap, to avoid the risk of freezing. Any unused vaccines should be returned to the pharmacy fridge within eight hours of first removal.

m) Discontinuation of service provision
If the pharmacy temporarily or permanently ceases to provide the service, they should update their NHS.UK website profile to reflect that the service is not available from the pharmacy as soon as possible.

n) Promoting the service to patients
Materials to help promote the Flu Vaccination Service to patients are available from and via the PSNC website. The National Pharmacy Association (NPA) and some LPCs have also developed materials to help contractors promote the service.

If contractors develop their own marketing materials to promote the service, they must ensure they comply with the requirements of the Terms of Service relating to promotion of services funded by the NHS.

If the NHS logo is used in materials related to the service, this must comply with the guidelines for use of the NHS identity by community pharmacies.

If contractors are considering using social media to advertise the Flu Vaccination Service, PSNC Briefing 001/17: Social media guide for community pharmacy teams and LPCs provides community pharmacy teams and LPCs with a guide to help them to consider the benefits of using Twitter and other social media. The on-demand recording of PSNC’s Making the most of social media webinar also offers guidance on what social media is and how to get the most from it.

The NPA, the Royal Pharmaceutical Society and the General Pharmaceutical Council have also all issued guidance on social media, which should be considered when advertising the service in this way.

o) Frequently Asked Questions
The PSNC website contains a wide range of Frequently Asked Questions (FAQs) and answers and these will be updated on an ongoing basis.

p) Further information and resources
The following links provide further information on the service and vaccinations and many are essential reading for pharmacists who will be providing the service.

Immunisation against infectious disease: the green book

Practical resources

Practical resources to support provision of the Flu Vaccination Service are available on the PSNC website.

If having read this PSNC Briefing and the information and resources on the PSNC website you have further queries about the Flu Vaccination Service or you require more information please contact the PSNC Services Team.
### Annex 1 - Checklist for the Flu Vaccination Service

<table>
<thead>
<tr>
<th>Preparing to provide the service</th>
<th>Completed</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>1.</strong> Visit the <a href="https://www.psnc.org.uk">PSNC website</a> and read through the PSNC Briefings and other service information / documentation and familiarise yourself with the resources available.</td>
<td>☐</td>
</tr>
<tr>
<td><strong>2.</strong> Complete face-to-face training covering injection technique and basic life support – a list of training providers can be found at <a href="https://www.psnc.org.uk/flutraining">psnc.org.uk/flutraining</a> (some LPCs are also arranging training events). This must be done at least every three years.</td>
<td>☐</td>
</tr>
<tr>
<td><strong>3.</strong> Read the service specification and NHS England’s Flu Vaccination Service Delivery Guidance and letter for the 2019/20 service.</td>
<td>☐</td>
</tr>
<tr>
<td><strong>4.</strong> Read the national Patient Group Direction (PGD) and ensure you fully understand the content including the eligible patient groups, the inclusion and exclusion criteria and the record keeping requirements.</td>
<td>☐</td>
</tr>
<tr>
<td><strong>5.</strong> Complete the Practitioner declaration on the PGD to confirm you have read and understood the content of the PGD and that you are willing and competent to work to it within your professional code of conduct. You must sign a copy of the PGD in each pharmacy that you work in.</td>
<td>☐</td>
</tr>
<tr>
<td><strong>6.</strong> Request that the relevant person for the pharmacy completes the Authorising Manager section of the PGD. An Authorising Manager must sign a copy of the PGD in each pharmacy that you work in.</td>
<td>☐</td>
</tr>
<tr>
<td><strong>7.</strong> If you are unfamiliar with the Declaration of Competence (DoC) process, download and read <a href="https://www.cppe.ac.uk/doc">A guide to using the Declaration of Competence (DoC) system</a>, which is available at <a href="https://www.cppe.ac.uk/doc">cppe.ac.uk/doc</a>.</td>
<td>☐</td>
</tr>
<tr>
<td><strong>8.</strong> Print out the Declaration of Competence self-assessment framework for Vaccination services (available at <a href="https://www.cppe.ac.uk/doc">www.cppe.ac.uk/doc</a>). Work through and complete the DoC self-assessment framework, carrying out additional learning as required.</td>
<td>☐</td>
</tr>
<tr>
<td><strong>9.</strong> Print and sign the DoC statement of declaration. A copy of the completed DoC statement of declaration must be attached to the PGD you have signed at each pharmacy you work at. The DoC process must be completed every two years.</td>
<td>☐</td>
</tr>
<tr>
<td><strong>10.</strong> Update your CPPE learning record to confirm you have signed the DoC statement of declaration and indicate the date the document was signed.</td>
<td>☐</td>
</tr>
<tr>
<td><strong>11.</strong> Watch the PSNC recorded video on the Flu Vaccination Advance Service: <a href="https://psnc.org.uk/fluwebinar">psnc.org.uk/fluwebinar</a> – This will be available soon and will be highlighted through PSNC’s normal communication channels.</td>
<td>☐</td>
</tr>
<tr>
<td><strong>12.</strong> Consider getting vaccinated against hepatitis B if you haven’t previously had the vaccination. PHE’s advice in <a href="https://www.gov.uk/government/publications/the-green-book">the Green Book</a> is that hepatitis B vaccination is recommended for healthcare workers who may have direct contact with patients’ blood, blood-stained body fluids or tissues. This includes any staff who are at risk of injury from blood contaminated sharp instruments. The <a href="https://www.hse.gov.uk/infectious-disease/hbs/index.htm">Health and Safety Executive guidance on blood borne viruses</a> provides further advice on this issue.</td>
<td>☐</td>
</tr>
</tbody>
</table>
13. Read and sign the standard operating procedure (SOP) for the service in each pharmacy you intend to work at.
   - Ensure you know what role support staff will have in providing the service;
   - Review your working practices to ensure that the Flu Vaccination Service can be built into your routine work as well as continuing to be able to offer Medicines Use Reviews, the New Medicine Service and any local services;
   - Ensure you know whether an appointment system for the service will be used or whether the pharmacy allows ‘walk ins’; and
   - Ensure relevant staff have read, understand and have signed up to the SOP.

14. Familiarise yourself with relevant service documents, for example:
   - anaphylaxis telephone card (display near the phone);
   - chaperone policy
   - needle stick injury procedure; and
   - guidance on infection control procedures, including hand hygiene guidance.

15. Determine whether your local NHSE&I team has made an IT system available to support record keeping and notification of GP practices of vaccinations undertaken. Ensure you have the required logon credentials for the system and are familiar with how to use it.

16. Ensure you have any necessary equipment/supplies needed for provision of the service, for example:
   - a spill kit;
   - an anaphylaxis pack (check the expiry of the adrenaline injection); and
   - clinical waste bin.

19. Sign up to PSNC’s email newsletters to ensure you don’t miss out on further information on the service as it becomes available.

---

**Daily checks when providing the service**

<table>
<thead>
<tr>
<th></th>
<th>Completed</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Ensure your consultation room is clean and tidy and clear of clutter and there are no trip hazards.</td>
</tr>
<tr>
<td>2</td>
<td>Check you have enough equipment/supplies needed for provision of the service.</td>
</tr>
<tr>
<td>3</td>
<td>Check the fridge temperature.</td>
</tr>
<tr>
<td>4</td>
<td>Ensure you have supplies of the relevant service paperwork.</td>
</tr>
<tr>
<td>5</td>
<td>Check your stock of vaccine is enough for likely demand.</td>
</tr>
</tbody>
</table>

**PSNC Briefing 046/15: Pharmacy flu vaccination process** provides advice on how to provide the flu vaccination service in your pharmacy.
